S1015 Lift Station Upgrades and Force Main Assessments

What Are We Doing?

The District is working on capacity and other improvements to sewer Lift Stations 4, 5, 6, and 19, to accommodate current and future sewer flows. The lift stations as located:

- Lift Station 4: Adjacent to the Lake Serena Fire Station 23 situated at the west end of Lake Serene.
- Lift Station 5: Off of 164th Street S.W. at the end of the private drive (164th St S.W. and approximately 50th Pl. W.).
- Lift Station 6: At the end of 145th Street SW on tract 102 of the Highland Firs development.
- Lift Station 19: At the end of 28th Ave. W. within an easement on tract 100 of the Brierwood Meadows development.

What is Happening Now?

The District has completed a condition assessment of each lift station and associated force mains and has completed final design documents for recommended improvements for construction. The next step in the process is selecting a qualified contractor to perform the work.

What Can You Expect?

Construction is anticipated to start early summer of 2014 and continue through summer of 2015. Once a contractor has been selected, the contractor will identify the construction schedule and activity for each site. Residents in the effected area(s) will be notified in advance of planned construction activities.

How do I Get More Information on the Project?

The website will be updated quarterly or more frequently pending activities. Additional information can be obtained by contacting the District's project manager, Brigitte McCarty, at (425)743-4605 or at bim@awwd.com.
